Disclaimer

GS1®, under its IP Policy, seeks to avoid uncertainty regarding intellectual property claims by requiring the participants in the Work Group that developed this **Despatch Advice Line Item Extension Fish Traceability Business Message Standard (BMS)** to agree to grant to GS1 members a royalty-free licence or a RAND licence to Necessary Claims, as that term is defined in the GS1 IP Policy. Furthermore, attention is drawn to the possibility that an implementation of one or more features of this Specification may be the subject of a patent or other intellectual property right that does not involve a Necessary Claim. Any such patent or other intellectual property right is not subject to the licencing obligations of GS1. Moreover, the agreement to grant licences provided under the GS1 IP Policy does not include IP rights and any claims of third parties who were not participants in the Work Group.

Accordingly, GS1 recommends that any organization developing an implementation designed to be in conformance with this Specification should determine whether there are any patents that may encompass a specific implementation that the organisation is developing in compliance with the Specification and whether a licence under a patent or other intellectual property right is needed. Such a determination of a need for licencing should be made in view of the details of the specific system designed by the organisation in consultation with their own patent counsel.

1.1 Introduction

Message Definition / Business need

Fish Traceability Extension is an extension to the Despatch Advice Document used to enable tracking & tracing (traceability) of wild-caught fish and farmed aquaculture products from the point of capture to retail sale.

Principles

Typically, the Despatch Advice serves as a pre-announcement of the goods being shipped. In the context of fish product, additional track and trace data must be provided. The data are exchanged via an extension to the Despatch Advice on line item level.

Use case diagram

Use case description

Use Case Name	UC1
Use Case Description	Exchange of fish traceability history data and fish product despatch information in order to support traceability and quality management.
Actors (Goal)	Shipper (Fishing Vessel, Aquaculture Farm, Primary Processor, Distributor)
	Receiver (Secondary Processor, Distributor, Restaurant, Retailer)
Performance Goals	None
Preconditions	A trading agreement (including alignment of master data, payment and delivery terms) has been established between Shipper and Receiver.
	Traceability data for product(s) ordered have been compiled and prepared for exchange by the Shipper.
	The fish or aquaculture products are uniquely identified.
Post conditions	Receiver has been supplied with traceability data for fish or aquaculture products which are about to be delivered.
	Place, time and conditions for delivery have been communicated.
Main Scenario	Begins when the Shipper secures in his local storage medium the traceability data of fish or aquaculture product(s).
	Continues with:

Step #	Actor	Activity Step
	Shipper	Shipper sends the Receiver traceability data of fish products to be delivered.
	Receiver	Receiver receives this traceability data.
	Receiver	Receiver cross-checks traceability data with physical delivery.
	Receiver	Receiver adds internal information to traceability data, where applicable.

Ends when the Receiver secures the traceability data in his local storage medium.

6   Implementation Considerations

6.1   User Guide

The Functional User Guide Order contains more information about the structure and content of the Despatch Advice Line Item Fish Traceability Extension:
http://www.gs1.org/docs/ecom/xml/3/3.4/eCom-Trade_messages.html#FishExtension

6.2   Message Specific Considerations

A number of attributes in the Fish Traceability Extension are defined as the Code data type. This type allows for use of bilaterally defined code lists, which should be mutually agreed between trading partners, GS1 does not specify the code list to be used. The Code type is used when there are multiple code lists that could be implemented depending e.g. on the industry or geopolitical region.

For products intended for the European market the following code lists should be used:

- For attribute **fishSizeCode**: EU Fish Size Code - Official Journal of the European Communities No. L 334/1 dated 23 Dec 96

- For attribute **qualityGradeCode**: EuropeanQualityGradeCode EU Fish Freshness Code: COUNCIL REGULATION (EC) No 2406/96 of 26 November 1996 laying down common marketing standards for certain fishery products *http://eur-lex.europa.eu/legal-content/EN/TXT/PDF/?uri=CELEX:31996R2406&from=EN*

- For attribute **fishPresentationCode**: EuropeanFishPresentationCode *http://ec.europa.eu/fisheries/cfp/control/codes/code-fishpresentation.xls v1.2*

The Code data type contains a number of optional attributes. At least the following attributes should be used for the three above mentioned European code lists:

- codeListAgencyName

- codeListName

7 Summary of Changes

Any change in the GS1 standards is done based on the Work Request (WR) submitted by the GS1 User Companies or Member Organisations. All Work Requests are documented in the Work Request system available on the GS1 website: ***http://wr.gs1.org***. The system is accessible to registered users. New visitors need to register first, to be able to access it. WRs can be searched by the number referenced in tables below, see: Search Work Requests. The number starts with the two last digits of the year when it was submitted, followed by the consecutive number within that year.

✓ **Note:** WRs submitted earlier than February 2012 should be searched in Old Change Requests.
