### Introduction

The aim of the brochure on hand is to offer documentation describing the exchange of delivery data between business partners.

The basis of this elaboration is the international standard EANCOM® 2002. The message type ORDERS 011 is used to transmit relevant data. GEFEG.FX (Gefeg mbH, Berlin) was used as the documentation tool.

Please be aware to know that this booklet does not replace the complete specifications in the original chapters or other relevant instructions within the EANCOM® 2002 documentation. Instead, it deals with the description of segments, data elements and codes to be used for a specific task.

The current documentation has been produced by the GS1 Germany GmbH in Cologne. GS1 Germany assumes no liability for any damages incurring from the use of this documentation. This brochure or extracts thereof may only be published or forwarded to third parties with the express written consent of GS1 Germany, which holds copyright on this work.

### Important note

To fulfill the requirements of directive 2003/58/EG, article 4, C058 has been opened in NAD segments identifying a message sender. If the place in the 5 DE 3124 is not sufficient, the following RFF segments can be used, qualified with DE 1153 = GN. DE 1154 has got a capacity of 70 digits. Only in those cases, when no RFF segment follows NAD, a RFF+GN can be used in the heading section of the message. Within the EDI recommendations of GS! Germany this is only applicable for the messages REMADV and SLSFCT.

### This brochure offers different ways to start

#### Introduction

"Introduction" contains a short description of the respective message.

#### BusinessTerms

"Business Terms", is a table which links directly to the sequence numbers of the segments.

#### Diagram

"Diagram", is a hierarchical graphic depiction of all used segments in the same sequence as they are defined in the EANCOM® message. However, every segment is shown only once, and it is therefore possible that the sequence numbering is interrupted.

#### Structure

"Structure", is a list of all used segments in the same sequence as they are defined in the EANCOM® message. In general, for each piece of information one single segment is provided. Exceptions may arise when the occurrence of a segment is limited and can contain alternative information (e.g., segment BGM).

#### Segmentlayout

"Segmentlayout", an illustration that has been chosen to match the business terms (data from the inhouse application) with the elements from the EANCOM® syntax.

#### Codes

"Codes" contains a list of the codes used in the message.

## Einführung

---

### Examples

"Examples", provides at least one message example with comments. Please note that, for technical reasons, the examples can contain component data element separators, which would otherwise be represented as data element separators in the original messages.

### Print

"Print" opens the PDF documentation for the corresponding message.

### Message structure

#### Heading section

Specification of buyer and supplier, message date and number.

#### Detail section

Specification of GTIN to identify goods and services, and quantity.

#### Summary section

Specification of totals of the message.

## REFERENCES IN THE BEVERAGE SECTOR

### Note: Orders in the Beverage Industry

The message specifies details for goods or services ordered under conditions agreed between the seller and the buyer.

The ORDERS message applies for the following cases:

- Ordering of full trading units for delivery or self pick up
- Ordering of empties for delivery or self pick up

### Examples:

- Ordering of empty crates in case of a surplus of bottles in retail
- Manufacturer orders specific empties from a beverage wholesaler or retailer to relieve a shortage of empties at seasonal peak periods
- Order/ instruction for pickup of empties, e.g. if retail stock of empties has reached peak capacity

### Principles

The receiver of goods determines the product identification, quantity, delivery date/time and delivery location within the order. Supplementary information regarding empties can also be indicated.

Trading partners and locations are identified by their Global Location Numbers (GLN). One order is

issued for one delivery to one location at one date/time. Traded units are identified only by Global

## **Einführung**

---

Trade Item Numbers (GTIN). The ordered quantity refers to this traded unit. Each line item refers only to one product.

Additional detailed information can be found in chapter "6. ECR in der Getränkewirtschaft" of the ECR-Supply Side manual.

### **REFERENCES IN THE MEDIA SECTOR**

#### **Supply of goods**

The following references are used within the Media sectors to manage the supply of goods:

BGM segments are mandatory. RFF-Segments printed in bold are depending. They must be specified in the detail section as far as a default is not defined in the heading section.

In general the customer reference number (RFF+CR) is depending. If the order is generated by the supplier (agent order, VMI) this reference is replaced by the sellers reference number (RFF+SS). Only one reference number is indicated, either the customer reference number or the sellers reference number.

<p>Segmentstatus: Mandatory</p> <p>This segment is used to envelope the interchange, as well as to identify both, the party to whom the interchange is sent and the party who has sent the interchange.</p> <p>For international EDI the use of character set UNOA is recommended. For national (German) EDI the use of UNOC is reasonable because it contains lower case letters and umlauts.</p> <p>Note DE 0008: The address for reverse routing is provided by the interchange sender to inform the interchange recipient of the address within the sender's (source) system to which responding interchanges must be sent. It is recommended that the GLN be used for this purpose.</p> <p>Note DE 0014: The routing address is used to identify the receiver, if a provider adds service values for the actual receiver (e.g. consolidated companies, corporate group). The use of the identification system (e.g. GLN) has to be agreed bilaterally.</p> <p>Note DE 0020: This data element must contain a consistent sequential number per interchange between sender and receiver of the transmission.</p> <p>Note DE 0032: This data element is used to identify any underlying agreements which control the exchange of data. Within EANCOM , the identity of such agreements must start with the letters 'EANCOM', the remaining characters within the data element being filled according to bilateral agreements.</p> <p>Example: UNB+UNOC:3+4012345000009:14:4012345000018+4000004000002:14:4000004000099+181013:1043+4711+REF:AA+++EANCOM+1' The EANCOM file 4711 dated 13.10.2018, 10 h 43 is sent by the issuer identified with GLN 4012345000009 to the receiver identified with GLN 4000004000002.</p>

Segmentstatus: Optional

This segment is used to specify additional item identification such as buyer's or seller's item number.

Promotion orders and normal purchase orders should be separated. If the order contains both types of business cases, this segment is used to identify promotional products.

DE 7143 = PV, Promotional variant number: The number, which completes the identification code of a product, identifies this product as a variant of the standard product. The specification is necessary, if the variant differs only slightly and does not justify a modification of the main identification code.

DE 7140 type of waste: The code list of the European Union commission (for waste commission 11) is used, e.g. 91201 = packing material and cardboard boxes

Note to DE 3055: This dataelement will only be used, if DE 7140 does not contain a GTIN.

Example: PIA+1+1230815:SA: :91+563985:IN: :92+4000004000035:PV: :9+91201:EWC: :2'

The suppliers article number is 1230815, the buyers article number is 563985, GTIN 4000004000035 is a promotional variant, the type of waste is 91201.
